A-2703	SERVER-MAIL Phishing attempt possible download of malware	Medium	The user may have opened a malicious email and opened attachments or clicked links.	Escalated ▾

Ticket comments
The phishing email was confirmed as a true positive upon investigating the file hash and message body (which contains several pieces of suspicious grammar errors). The file hash has been confirmed by security vendors to exhibit malicious backdoor capabilities. Further investigation into the internal network should be conducted to ensure the file did not execute and create an access point for the threat actor.

Additional information

Known malicious file hash:
