

Security organization worksheet - SDR

Part 1: Describe your security interests
• Protecting customer data • Proactively responding to network threats • Investigating a wide variety of security incidents • Working with a team to ensure strong security posture • Using programming automation to improve efficiency
Part 2: Identify three organizations and include their mission or objectives
• Organization 1: SafeBreach - This organization performs exposure validation, using automation to proactively hunt for network threats. The software they provide continuously attempts to breach the system to ensure there are no holes in an organization's security posture. • Organization 2: Siemens - This company offers a wide variety of cyber security services across multiple industries such as food service, railways, automotive factories, and healthcare. Siemens also presents a focus on sustainability, which I find particularly interesting as it aligns with Arizona State University's most notable priorities. • Organization 3: Dashlane - This company offers efficient solutions for credential security and password management, as well as cloud-based security services. The company serves over 25,000 businesses of all sizes and needs across the U.S..
Part 3: Write out which organization aligns with your interests and why
• Organization 1 (SafeBreach): This organization does align with my interests in proactive security solutions. I'd love to learn more about their methodology and how their service protects customers. • Organization 2 (Siemens): Siemens covers a lot of areas of interest but may be too broad when considering entry-level roles. I'm curious to explore how Siemens manages security for so many clients at once in today's age of cyber security threats. • Organization 3 (Dashlane): I appreciate the universality of the service Dashlane offers much like Siemens's. It seems to have put a lot of effort

into creating a polished and reliable service for credential management. I appreciate the focus of the business being slightly more narrow than other security companies, but wonder how it compares to its competition in the field.

- **Best choice for my professional interests:** Of the organizations I briefly researched, I'd say that SafeBreach most closely aligns with my values and interests as a future security professional. I'm intrigued by the methods they use to proactively hunt for vulnerabilities in order to protect the businesses that rely on them. I will continue to research and explore industry leading companies, entry-level roles, and the various ways cyber security is implemented.
